- Reusable studs
- Requires a 17/64" drill bit
- 50 studs per package

More Knife Sharpening Ideas

A good addition to the farrierproducts™ knife sharpening arsenal is the Baldor 1/4 hp buffer that runs at 1800 rpm. This is an ideal unit to mount sharpening and buffing wheels. Most knife making sites indicate that the lower speed is optimum for sharpening as you get less heat buildup in the blade. The unit shown here has the 6" Buffing Sharpening wheel and a 6" medium density felt wheel (with a groove for the hook). The felt wheel will be less likely than flexible wheels like muslin or sisal to roll the edge of your blade. We call this the "Roy Bloom" system. Roy recommends using the buffing sharpening wheel for your first run on

the blade, then going to the felt wheel and using a green buffing compound to do your final honing. The sharpening and felt wheels are 3/4" wide, a width that should work much better than 1" for hoof knife blades. The sharpening wheel does not require use of a buffing compound, only the felt wheel should have compound applied.

FPD, Inc. Website New and Improved

Be sure to visit FPD's recently updated web site at www.farrierproducts.com Helpful features include photos and descriptions of:
